Our **why**

Safe machines, safe people

We believe safety is paramount, and at Ideagen Plant Assessor, we're dedicated to ensuring everyone working with machinery returns home safely.

Our purpose is to provide hire companies with easy to use software that helps ensure their entire fleet is well-maintained, fully calibrated and compliant so machines are fit-to-use every single time they're delivered to site.

Benefits of using Ideagen Plant Assessor

When hiring out your machines, use Ideagen Plant Assessor to provide all necessary safety information to your customers, ensure machines are up to Australian Standards, and have confidence that compliance is under control.

Proud member of

Made for your machines

With over 120,000 models of machines in Ideagen Plant Assessor, our risk assessments are specific to the equipment you are hiring out. We monitor the latest legislation and keep our database up to date, so you know it's information you can trust.

- **Satisfy your legal obligations** and digitally supply required safety and hazard information to your customers
- **Make it simple to inspect** machines, keep risk assessments consistent and records organised
- **Technical expertise** and machine specific information at your fingertips
- **Share a virtual machine profile** with customers, including all relevant safety documents
- **Provide a seamless on-supply** experience when hiring equipment

Easy sharing of documents and information

Share required information related to machines as part of your legal obligations. Upload documents to a virtual machine profile, allowing you to provide an efficient, seamless experience for the customer.

Access to on-site machinery experts

Our team of machinery and compliance professionals are available to come to your location, assess machinery, complete risk assessments and fully set up the entire compliance management processes.

Products and services

When it comes to machinery compliance, there are a lot of moving parts. Ideagen Plant Assessor gives hire companies all the tools to easily manage every aspect of compliance, to help ensure their work health and safety obligations are fully met.

Risk assessments

Providing a Hire Risk Assessment is a mandatory part of satisfying compliance obligations, but they are often incomplete, time consuming, and do not apply the correct controls to manage identified risks.

Ideagen Plant Assessor's digital risk assessments are machinery specific. And once complete, the risk management report reflects the latest updates to legislation, regulations, and standards. This gives you peace of mind that hazard controls are relevant to your machine, and satisfies your compliance obligations.

Document management and storage

With Ideagen Plant Assessor's digital library, cut out the paper chase by keeping all documents related to your machinery compliance in one place

This ensures documents are instantly available when you're hiring out machines, or they're needed for reference or in case of an incident.

Corrective action management

After completing a risk assessment, Ideagen Plant Assessor provides an instant hazard control report that considers legislative requirements, Acts, Australian Standards, regulations, and best practice. Use the actions dashboard in Plant Assessor to monitor, manage and resolve outstanding actions – and keep detailed records.

Service scheduling and recording

Keep track of your fleet's service schedule with ease. Get notifications when machines are due for service, so you can plan ahead and keep your machinery running at peak performance. Upload service history, and keep all of your records in one place, ready to download, share or store.

Pre-hire and off-hire inspection

Fully assess machines prior to them being hired out with a pre-hire inspection. Then, when machines are returned, perform an off-hire inspection. This ensures any issues during the hire period are highlighted, and any servicing and maintenance requirements can be acted on.

Need Safety Labels? We've got you covered

We strongly believe that safety labels reduce injuries and can save lives.

That's why we've developed our own range; to reduce the risks and dangers associated with machinery in a thorough, consistent and thoughtful way.

Our extensive and exclusive range of machinery safety labels are high quality, long lasting and compliant with Australian and International Standards.

- ✓ Our safety labels are competitively priced and packaged to your needs
- ✓ Machine risk assessment label packs
- ✓ Full machine label sets
- ✓ Individual safety labels

You can order all required safety labels directly after completing a machinery risk assessment in your Ideagen Plant Assessor account, or simply visit our online shop to browse our extensive range.

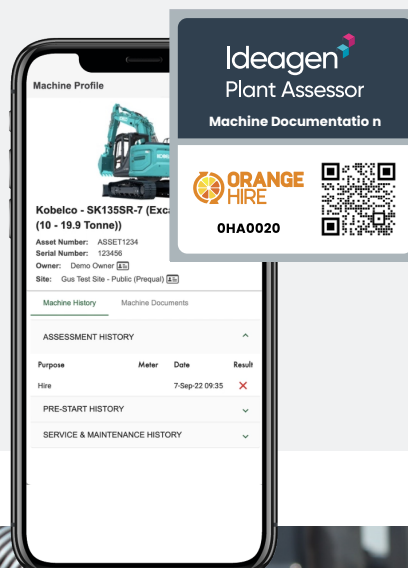

QR Code Labels – scan for safety

Simplify the safety information sharing process and meet your supplier obligations by affixing an Ideagen Plant Assessor QR code.

A single scan provides access to the most recent risk management report, service and maintenance records, and other crucial safety information relating to the machine.

With live version control, machine-specific documents are kept up-to-date, customers remain informed and safety obligations are satisfied.

Trusted by hire companies nationwide

We work with Hire Companies across Australia to ensure they have a complete machinery compliance solution, with customers including:

“

Plant Assessor is quick and easy to use and is very thorough. Our team members can check the status of plant safety at any time, and can also provide detailed, machine-specific risk assessments to our clients when they hire plant with the click of a button.

We have been able to conduct comprehensive safety assessments on more than 600 pieces of large plant in the last 12 months, which would have taken us years using our old paper system. The system allows the team to have a more unified approach when monitoring and maintaining the safety of the fleet.”

Peter Lutschen
Safety Manager – Ezyquip

The trusted name in machinery compliance for thousands of hire companies, including:
